

Gas Engineering Operative

ST0155

Funding Band £22,000

Typical Duration 18 months

EPA method. Portfolio including Gas Safe® registration, competency test and work log review. Knowledge assessment

Job role

Gas engineering involves the safe installation, commission, decommission and the ongoing service and repair of gas appliances in either a domestic or non-domestic setting. Appliances can include, but are not limited to, a range of work categories such as central heating boilers, unvented hot water storage, ducted air heaters, cookers, space heaters, meters, alternative fuel, boosters, testing and purging for industrial pipework. Roles in gas engineering will include explaining how installations and appliances work, providing energy efficiency advice and ensuring customer service excellence at all times. Gas engineering operates strictly within the requirements of health and safety legislation.

Apprenticeship Journey

Ready for Training

- Initial assessment
- Maths and English training
- Knowledge, skills and behaviour training in line with the standard
- Gateway readiness

Gateway requirements

- Maths level 2
- English level 2

Gateway assessment

- Summative portfolio, which includes a competency Test and Gas Safe registration.
A portfolio of carefully selected evidence to showcase competency which includes a work log, an observation and an interview carried out by a technical expert and gas safe registration
- Knowledge assessment
A multiple-choice assessment paper completed under test conditions.

Programme

During this programme the apprentice will learn and develop a wide range of knowledge, skills and behaviours which are needed to carry out the role of a Gas Engineering Operative effectively. In terms of the EPA, the competency test, portfolio, work log review and knowledge assessment will provide the opportunity for substantial synoptic assessment across the totality of the standard allowing the apprentice the opportunity to demonstrate competency.

Grading

Pass or Distinction
